

IN THE SPECIFICATION:

On page 1, just after the Title, please insert the following paragraph:

This is the U.S. National Phase of International Application No. PCT/GB2003/002826, filed July 1, 2003, and also claims benefit of priority to U.S. Provisional Application No. 60/393,292, filed July 5, 2002, the contents of both of which are hereby incorporated by reference in their entireties.

On page 17, please amend the second full paragraph as follows:

A connection device, also referred to as a “releasable fastener,” secures the modules together in a releasable fashion, so that the air input port 130 is aligned with the air output port 9. The connection device of this embodiment includes a pair of manual release hinges 6a, 6b, a pair of tension straps 170 and a pair of lever latches 7. It is desirable to have fastenings that enable rapid connection and disconnection of the two modules 2,3, preferably without the need for tools, and the connection device of this embodiment allows these desiderata to be met.
